

Sway Community Speed Watch report as of 25/9/2017

Sway Parish Council website has a page devoted to Community SpeedWatch where many of the latest statistics are published, so this report should be read in conjunction with the web page at <http://www.sway-pc.gov.uk/csw> .

Shortage of volunteers and poor weather conditions meant that our ability to conduct SpeedWatch sessions in September was curtailed. We did however manage 6 sessions totalling 6.5 hours.

We sent details of 67 vehicles for PNC checking and processing. No vehicles exceeded 50 mph. This is considerably better than in August.

Feedback from the police:

Number failing PNC checks = 4: No current Owner = 3, PNC mismatch = 1

Number of letters sent =57: Letter 1 = 49, Letter 2 = 8

Number escalated = 6 – all multiple incidents

Statistics show a marked improvement at all locations surveyed. However, although fewer people were speeding at Arnewood Bridge, several were observed “showing off” by accelerating dangerously past despite atrociously wet road conditions. Such drivers are unlikely to respond to the gentle persuasion of SpeedWatch so we continue to request uniform police assistance at the roadside to demonstrate that they fully support us.

The main stats for this month are:

Date	Time	hrs	Location	Vehicles reported to Police	Total Vehicles passing	Maximum Speed	Number exceeding 35mph	%
04/09	08:00-09:00	1	DurnstownN	13	201	39	28	14%
06/09	08:00-09:00	1	PitmoreS	10	222	39	15	7%
06/09	16:30-18:00	1.5	PitmoreM	13	257	38	23	9%
08/09	08:00-09:00	1	Brighton	8	53	48	8	15%
08/09	16:30-17:30	1	ArnewoodN	20	197	44	29	15%
09/09	08:00-09:00	1	DurnstownS	3	92	42	4	4%
Overall	6.5 hours			67	1022	48	107	10%

Statistics since we began in 2014 can be viewed at <http://www.sway-pc.gov.uk/csw>

These charts show how the percentages of vehicles speeding at 35 mph or more have changed since we began collecting SID stats in July 2014.

The trend lines are 8 session rolling averages hopefully giving an indication of any improvement or otherwise in the the statistics.

Arnewood Bridge Road is still our most severe problem area. We have clearly had a positive effect but overall, 57 vehicles per hour or more than one in every 3 are being driven at 35 mph or higher. It is beginning to look as though the trend is flattening out so this may be as good as we can get with SpeedWatch alone.

Status RED

Durnstown continues to show improvement. The new location further up the hill is now almost certainly the reason. However, when we are not there driver behaviour is very different so further measures are needed. The use of a radar operated flashing Speed Limit Reminder looks to be the most suitable solution.

Status AMBER

Brighton Road remains unchanged and consequently is now worse than at Durnstown. The highest speed recorded this month was at Brighton Road – 48mph. Such a speed is far too high for a road that has no pedestrian walkway and is used heavily by walkers and cyclists.

Status AMBER

Since we conduct SpeedWatch surveys at three distinct locations on Pitmore Lane, each having different characteristics, the results from them are now shown on separate graphs.

Pitmore Lane South With 39 vehicles per hour (1 in 4 vehicles) overall exceeding 35 mph, numbers are approaching Arnewood Bridge levels. In addition SID has recorded 15 vehicles exceeding 50 mph since December 2014. Stats this month appear much better but it will require several more months improvement before we can be sure.

Status AMBER

Pitmore Lane Middle continues to improve. If this continues we should be able to change its status to green.

Status AMBER

Pitmore Lane North is our one success story. It looks as though the trend has flattened out and that this is probably as good as we are likely to get with SpeedWatch alone.

We were unable to perform a session here this time.

Status GREEN

Manchester Road is perceived to be a problem area by residents. Our 12 surveys there so far have recorded just thirteen motorists exceeding 35mph. However it is worthwhile noting that, due to restrictions on numbers of volunteers required at the roadside, we have not performed any surveys there since September 2016.

Charts from website for those without internet access

Overall Speeding Trends. Does not take into account location. Trend lines are 20 session rolling averages. The trend lines continue to show a small improvement.

Trends in percentages of drivers obeying the speed limit on each of the roads surveyed. Trend lines are 8 session rolling averages. Here we **do** want the lines to rise. There are encouraging signs apart from at Brighton Road.

Quite Interesting statistics since we began Community Speed Watch in April 2014.
